

Superwand soffit panel

Application

For reasons of space (window hinge etc.) it is sometimes difficult to insulate the window soffit with the Superwand DS panel. As sometimes even the 10mm Superwand DS panel is too thick for this application, we now offer our new **only 5mm thick Superwand soffit panel**.

Similar to the Superwand DS panel, the new soffit panel is made of rigid polyurethane foam lined on both sides with a vapor barrier and cardboard.

Thermal conductivity: $\lambda = 0,025 \text{ W/mK}$

Implementation

See implementation of the Superwand DS insulation panel

Dimension

Dimension of panel: 5 x 390 x 1'250 mm

Packaging: box of 20 panels

Art. no. 33005
